

# Empire State Building and the Seattle Space Needle

Between April and June of 2020, two of America's iconic landmarks, New York City's Empire State Building, and Seattle's Space Needle installed AtmosAir Bi-Polar Ionization systems.

The Seattle Space Needle installed AtmosAir inside their Observation Deck. The Empire State Building, and the Empire State Realty Trust installed AtmosAir throughout the entire Empire State Building, including the Observation Deck, Offices, Retail outlets and Restaurants.

AtmosAir's Bi-Polar Ionisation air purification systems were installed to continuously disinfect the indoor air and to protect tourists, employees and tenant's from Covid-19, germs, bacteria, dust and pollutant particles (PM10, PM2.5, PM0.3), and VOC's.
